Every year across the country, heart attacks and strokes are responsible for killing 50 percent of the firefighters who die while on-duty. Worldwide Facilities®, Inc. and Fireman's Fund Insurance Company® joined together to donate \$24,378 to the Los Angeles Fire Department to help purchase new workout machines for the city's firefighters to encourage physical fitness.

This equipment is specifically designed to strengthen the heart, muscles and entire body. A firefighter's job is very strenuous and we're committed to helping them maintain healthy lives and staying physically fit throughout their careers. Studies have shown that a regular fitness regime can have a dramatic impact on firefighter wellness, with up to 71 percent fewer work-related injuries, a 43 percent reduction in sick leave, and a 25 to 45 percent reduction in sprain/strain injuries.

The grant was made through the Heritage ProgramSM. Under the program, agents and brokers across the country who sell Fireman's Fund® products, like Worldwide Facilities, have the opportunity to direct grants to fire departments for lifesaving equipment, training and community education. Each year, millions of dollars are awarded to fire service organizations.

On behalf of our firefighters and the residents of Los Angeles, I want to thank Worldwide Facilities and Fireman's Fund for their generosity and support to the Los Angeles Fire Department.
